

NAME:ARCHANA M

STUDENT OF FEDERAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Smart Accessible Calculator (Java Project)

Overview:

This project is a Smart Calculator developed using Java Swing. It includes features like voice output, animated buttons, error handling, and a user-friendly interface.

Features: -

Calculator with basic operations (+, -, *, /) - Voice output for accessibility - Animated buttons for better UI experience - Error handling (invalid input, divide by zero) - Welcome screen and history screen

Technologies Used:

Java, Swing, AWT

Features (bullet points)

- **Voice output**
- **Animated buttons**
- **Error handling**
- **History / welcome screen**

What I learned?

- **Learned how to build a desktop application using Java Swing**

- Understood event handling using ActionListener and button clicks
- Gained knowledge of designing user interfaces with layouts, colors, and components
- Implemented basic arithmetic logic for calculator operations
- Learned how to handle errors such as invalid input and division by zero
- Added accessibility features like voice output for better user experience
- Improved problem-solving and debugging skills while developing the project
- Learned how to structure and present a project for GitHub and academic submission
